

CLEAN WATER IS NO ACCIDENT...

Plan ahead and protect your community drinking water and wastewater system assets.

The American Infrastructure Network is a **concierge service** meeting the planning and educational needs of community drinking water and wastewater system owners and operators.

We offer 10-year water system asset protection plans at **no cost** to communities across Illinois. Prepared in collaboration with licensed and experienced engineering firms, our plans help you spot developing problems and avoid costly and unnecessary repairs and replacements to your water system assets. Each plan includes:

- Complete inspection of all drinking water and wastewater system assets
- Prioritized lists of needed and recommended maintenance, repairs, and replacement
- A 10-year recommended schedule of system protection activity
- Recommendations for building drinking water and wastewater system strength and capacity to accommodate community growth and development
- Convenient access to valuable continuing education unit (CEU) courses for water system operators
- Technical assistance with identifying and applying to state water system project funding sources
- Direct access to our database of qualified industrial contractors fully compliant with State of Illinois laws and regulations regarding corrosion work

\$350 million in state funding is currently available for community drinking water and wastewater system projects. But to apply, **project plans** must be in place. American Infrastructure Network asset protection plans give you the information you need to move the application process forward.
